

PROFILE

I am a builder. My passion is full lifecycle visual/interaction design and full-stack web development. As an engineer-designer, I'm able to rapidly design user interfaces and experiences that are as delightful to use as they are feasible to build and maintain. Over my 15 year career, I've tailored, deployed, and managed all major CMS frameworks for over 150 clients ranging from start-ups to enterprise corporations. Through this experience, I've learned to design and develop in a single motion, working backward from a vision of the outcome and using the optimal mix of CMS, frameworks, and systems for each project.

RESPONSIBILITIES

- Worked directly with stakeholders and product team members to establish project specifications, provide recommendations for user experience and functionality, assist with project planning, and set timelines for execution.
- Designed, presented, and developed interactive projects that met brand guidelines and user experience goals.
- Consistently performed design & development duties within timelines in fast-paced agency environments.
- Supported engineers with creative solutions that required a balance between user experience, design aesthetic, and development timelines.
- Led engineering & design teams to create award-winning web and mobile applications.
- Built strong internal and external working relationships.
- Utilized current CSS3 techniques, SVGs, and Lottie animations to create engaging interactive experiences.
- Developed custom plug-ins, components, functions, and themes for WordPress, HubSpot, Shopify, Joomla, and Magento content management systems and backend frameworks.

TECHNICAL SKILLS

LANGUAGES

W3C Validated
HTML5
CSS3 / SCSS / LESS
JavaScript / jQuery
PHP
MySQL

FRAMEWORKS

Bootstrap
Foundation
Laravel
Symfony
